

Sept 2018

Dear Doctor;

NORPROLAC[®]
(quinagolide hydrochloride)
STARTER PACKs
are BACK!

- NORPROLAC[®] is indicated for the **treatment of hyperprolactinemia** (idiopathic or originating from a prolactin-secreting pituitary microadenoma or macroadenoma) ¹
- NORPROLAC[®] treatment may **effectively lower prolactin levels** in patients with **pituitary tumours** but does not obviate the necessity for radiotherapy or surgical intervention where appropriate ¹
- NORPROLAC[®] should be **taken once a day at bedtime** with a snack. Dose must be titrated individually on the basis of the prolactin-lowering effect and tolerability ¹
- With the NORPROLAC[®]'**starter pack**', **treatment begins with 0.025 mg/day** for the first **3 days**, followed by **0.050 mg/day** for a further **3 days**. **Day 7** the recommended dose is 0.075 mg/day. Maintenance dosage ranges from **0.075 to 0.150 mg/day**¹
- NORPROLAC[®] is a selective dopamine D2 receptor agonist, **Non-ergot derived** ¹
